

# Microscope Lens for iPhone 4

## MICLENS14

Fit this nifty little gadget to your iPhone 4 using the figure-hugging case provided and transform your camera into a mini microscope capable of 100x magnification!

Ever wondered what a teeny-weeny dust mite looks like close up? Or just how intricate a leaf is? Not to mention how seriously freaky human skin looks under a microscope? Well, if you're the proud owner of an iPhone 4, you're in luck - this pocket-sized gizmo is your passport to getting your zoom on! Simply click the case to the back of your handset, screw the microscope into the thread provided and away you go!

What's more, because it features a super-bright white LED for added illumination, you can be sure you won't miss out on any of the minutiae. There's a telescopic zoom function and focus dial, too, so you can twiddle away until what you're seeing is crystal clear. Not only that, thanks to the camera function on your handset, you can even snap fabulous digital stills of your discoveries - never before has 'are you ready for your close-up?' been so apt!

Besides using this ingenious microscope for fun (although that's always a good option), it's a magnifying must-have for aspiring model makers, would-be jewellers or electronic engineers.

- >> Compact 100 x Microscope
